NOTICE

This report was prepared as an account of work sponsored by an agency of the United States Government. Neither the United States Government nor any agency thereof, or any of their employees, makes any warranty, expressed or implied, or assumes any legal liability of responsibility for any third party's use, or the results of such use, of any information, apparatus, product or process disclosed in this report, or represents that its use by such third party would not infringe privately owned rights.

NOTICE

Availability of Reference Materials Cited in NRC Publications

Most documents cited in NRC publications will be available from one of the following sources:

1. The NRC Public Document Room, 1717 H Street, N.W.
   Washington, DC 20555
2. The Superintendent of Documents, U.S. Government Printing Office, Post Office Box 37082, Washington, DC 20013-7082
3. The National Technical Information Service, Springfield, VA 22161

Although the listing that follows represents the majority of documents cited in NRC publications, it is not intended to be exhaustive.

Referenced documents available for inspection and copying for a fee from the NRC Public Document Room include NRC correspondence and internal NRC memoranda; NRC Office of Inspection and Enforcement bulletins, circulars, information notices, inspection and investigation notices; Licensee Event Reports; vendor reports and correspondence; Commission papers; and applicant and licensee documents and correspondence.

The following documents in the NUREG series are available for purchase from the GPO Sales Program: formal NRC staff and contractor reports, NRC-sponsored conference proceedings, and NRC booklets and brochures. Also available are Regulatory Guides, NRC regulations in the *Code of Federal Regulations,* and *Nuclear Regulatory Commission Issuances.*

Documents available from the National Technical Information Service include NUREG series reports and technical reports prepared by other federal agencies and reports prepared by the Atomic Energy Commission, forerunner agency to the Nuclear Regulatory Commission.

Documents available from public and special technical libraries include all open literature items, such as books, journal and periodical articles, and transactions. *Federal Register* notices, federal and state legislation, and congressional reports can usually be obtained from these libraries.

Documents such as theses, dissertations, foreign reports and translations, and non-NRC conference proceedings are available for purchase from the organization sponsoring the publication cited.

Single copies of NRC draft reports are available free, to the extent of supply, upon written request to the Division of Technical Information and Document Control, U.S. Nuclear Regulatory Commission, Washington, DC 20555.

Copies of industry codes and standards used in a substantive manner in the NRC regulatory process are maintained at the NRC Library, 7920 Norfolk Avenue, Bethesda, Maryland, and are available there for reference use by the public. Codes and standards are usually copyrighted and may be purchased from the originating organization or, if they are American National Standards, from the American National Standards Institute, 1430 Broadway, New York, NY 10018.

ADDENDUM TO ENTERPRISE MODEL

A. BACKGROUND AND PURPOSE

The Enterprise Model and Data Entity Dictionary were issued to the NRC on May 10, 1985. Subsequently, Touche Ross & Co. began the Data Modeling activities using the information contained in the Dictionary.

Data Modeling further organizes data entities by grouping the entities into logical clusters and establishing relationships between the entities. Data Modeling serves as a tool to validate the list of entities. As a result of this process, it is not unusual to find anomalies in the initial list of data entities.

Where anomalies were found in the initial list of data entities, changes were made to the entity list by either merging or deleting entities, as appropriate. The changes made to the entity list are described below. When using the Enterprise Model to determine an organization's information requirements, the reader should refer to the changes listed in this addendum.

B. SUMMARY OF CHANGES TO ENTITIES

FROM:	TO:	REASON:
Contractor (NRC)	Contractor/ Provider	Covers both contractors and non-paid providers such as grantees.
Cooperative Agreement	Provision Agreement	"Type" of provision agreement.
Generic Issue	Generic Issue/ Unresolved Safety Issue	Both are "types" of generic issues.
Grant	Provision Agreement	"Type" of provision agreement.
Interagency Agreement	Provision Agreement	"Type" of provision agreement.

Procurement Action	Provision Agreement Provision Request	Split into two entities to cover both the request for goods and services and the resulting agreement.
Unresolved Safety Issue	Generic Issue/ Unresolved Safety Issue	"Type" of generic issue.

DELETE ENTITY:	REASON:
Licensee Performance Evaluation	This is an application using information contained in other entities such as license and inspection.

For each of the new entities and those entities with name changes, revised pages for the Data Entity Dictionary are included in the Data Entity Dictionary addendum.

I. OVERVIEW

The purpose of this section is to:

- Describe the objectives of the Enterprise Model;
- Define the scope of the Enterprise Model;
- Outline our approach to developing the Enterprise Model;
- Identify the key assumptions in developing the model; and
- Describe the next steps in the Corporate Data Network (CDN) planning process.

A. OBJECTIVES

The objectives of developing an Enterprise Model are to:

- Determine agency-wide data requirements, and
- Identify unmet needs, redundancies, and unnecessary information in the existing systems.

We achieved these objectives by collecting information required to support organizational functions, and then comparing these information requirements with the data contained in the existing systems. Our detailed approach is described further below.

B. SCOPE

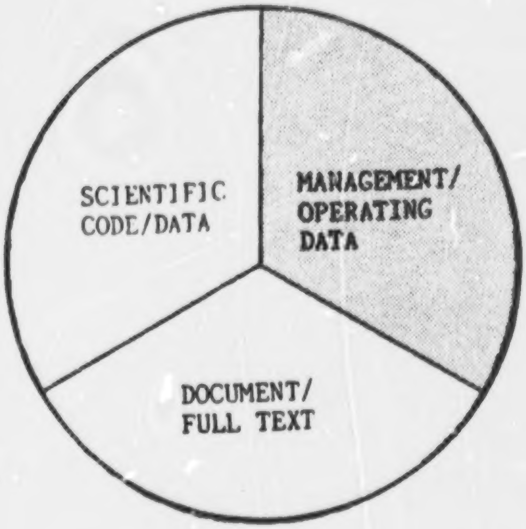
As shown in Exhibit I-1, the CDN will encompass three types of information -- management/operating data, scientific code/data, and document/full text. Some information will reside in both the management/operating data component and the document/full text component. For example, the full text of a report may be stored as a document, but data on that report might be collected and tracked in the management/operating data component. Similarly, scientific algorithms and computations will be contained in the scientific code/data component, but the permanent record of the results might be placed in the management/operating data component of the CDN.

The focus of the CDN Data Requirements Task performed by Touche Ross is on the management/operating data component of the CDN. The emphasis is on the data required for monitoring nuclear health and safety and the necessary supporting administrative information. Therefore, this model does not include detailed information requirements for document/full text

IX

EXHIBIT I-1

SCOPE OF DATA REQUIREMENTS TASK



SCIENTIFIC CODE/DATA
MANAGEMENT/ OPERATING DATA
DOCUMENT/ FULL TEXT

CORPORATE DATA NETWORK

INFORMATION COMPONENTS

or for scientific code/data. Where requirements for textual or scientific data were identified, these requirements were grouped under the entity headings "document" and "scientific code/data", respectively.

In focusing on the data needed for regulating health and safety, our scope includes all aspects of nuclear regulation to include reactors (both power and non-power), waste, materials, transportation, fuel cycle, and safeguards.

C. APPROACH

Our approach to developing the Enterprise Model involved the following major activities:

- Review current organizational structure, mission, goals, and functions.

  In order to prepare for interviews, we examined existing documentation describing the NRC and its business functions including:

  - Mission statements and organizational charts,
  - Annual reports,
  - Policy and Planning Guidance, and
  - Budgetary data.

- Interview management personnel.

  We interviewed the management of each office and division to identify the information needed to perform the functions of the organization. For many of the interviews, branch chiefs or section chiefs were also present. A total of 189 NRC staff were involved in the interviews. This represents approximately 5% of the entire NRC staff. A listing of those individuals who participated in the interviews is provided in Appendix B.

- Document and verify the interview information.

  We summarized the interviews and sent an interview confirmation memorandum to the office or division interviewed. The memorandum requested that the summary information be reviewed and changes or additions made, if necessary.

- Consolidate information needs.

  We then consolidated the information requirements of all the organizations and standardized the terminology. Subsequently, we refined the information through meetings

XI

with technical and administrative resource staff from several organizations. From this activity we identified 120 potential entities used in the NRC.

- Construct draft Enterprise Model.

  Using the refined information, we constructed a draft Enterprise Model with the assistance of an information engineering software package.

- Develop Data Entity Dictionary.

  For each of the information types (data entities) included in the Enterprise Model, we consulted with technical and administrative resource personnel to further define and describe the properties of the information. This information was consolidated into a Data Entity Dictionary.

- Coordinate an agency-wide review of the Enterprise Model and Data Entity Dictionary.

  We met with representatives of all organizations to refine and validate the information in the Enterprise Model and the Data Dictionary. We then revised the entity listing and organizational requirements for the model and updated the Data Dictionary information. NRC staff who participated in the validation process meetings are listed in Appendix C. The final list of 105 entities resulting from this process is presented in the Data Entity Dictionary and Section III of this report. The changes which occurred during validation are summarized in Appendix D.

- Review current systems information and compare to requirements in Enterprise Model.

  We reviewed current systems documentation and interviewed systems staff to identify data in the existing systems. We then compared the systems data with the data requirements documented in the final Enterprise Model. Our analysis of unmet needs, redundancies and obsolete information is presented in Section V of this report. This information will be used to develop cost/benefit analysis in preparing the strategic data plan.

D. ASSUMPTIONS

In developing the final Enterprise Model, we used information provided to us by the NRC during interviews or group meetings, and through the Enterprise Model validation process. The information presented in the model assumes that each organization reviewed its information requirements during the validation process and has provided us with the necessary changes.

XII

Our needs analysis was based upon the documentation of the current systems. Of the approximately 175 existing systems, our review was limited to 90 of the key systems. However, we were unable to complete our analysis for nine of these systems for one of the following reasons:

- Documentation was not available;
- Data in the system is proprietary;
- Development has not been completed; or
- The system is micro-computer based.

For those systems which we did review, our analysis is based on the following assumptions:

- The current systems selected by the NRC for our review contain key management or operational data that is most likely to be shared;

- The documentation for these systems is complete and accurate; and

- All organizations provided complete and accurate information on the systems used by their organization.

E. NEXT STEPS

The Enterprise Model and the Data Entity Dictionary reflect agency-wide and individual organizational information needs. It will form the basis for further activities. These activities will include:

- Define user views.

  Data is generally used in some sort of clustering. We will work with NRC resource staff to define the relationships between data entities. An example data entity cluster and its attributes is shown in Exhibit I-2.

- Group data entities into logical databases.

  Having established the entity relationships, we will model the data with a computerized modeling tool to develop logical databases. An example of logical databases is shown in Exhibit I-3.

- Develop a listing of application areas.

  From these logical databases we will be able to determine what types of application areas should be linked to which database(s). This is illustrated in Exhibit I-4.

BEST COPY AVAILABLE

- Develop cost/benefit analysis.

  Using information developed in the current systems analysis and other data, we will prepare a cost/benefit analysis of converting to a database environment.

- Prepare a strategic data plan.

  Finally, we will prepare a strategic data plan which summarizes the results of our analysis and provides the NRC with the guidance needed to begin detailed development of the logical databases/applications. This plan will place priorities on the databases and provide estimates of level of effort and time required to develop the databases/applications.

* * * * * * * * *

The remainder of this document further describes the modeling process and presents the output of the model. Accompanying this document is the Data Entity Dictionary which provides additional detail about the data entities in the model. It should be used as a reference document when reviewing the model.

II. ENTERPRISE MODEL PARAMETERS

The purpose of this section is to:

- Define the objects required by the Enterprise Model; and
- Explain where definitions of object values are located in this document or the Data Entity Dictionary.

A. OBJECT DEFINITIONS

The objects required to generate an Enterprise Model, their definitions, and example values are presented below:

OBJECT	DEFINITION
Goal	An end that all or part of an enterprise is committed to achieving. It is synonymous with a mission or objective. (Example: Assure safe operation of nuclear plants)
Organization	An office, division or other major unit within an enterprise. (Example: Division of Licensing)
Function	A group of processes that together support an organization's mission or goal. (Example: Enforcement)
Issue	A situation that presents uncertainty, complication, additional complexity, or difficulty to an enterprise. An (issue) potentially can change the way an organization does business. (Example: Reduction in the number of new reactor license applications)
Entity	An organized collection of data elements. It can also be thought of as a person, place, thing or occurrence having characteristics of interest to an enterprise. (Example: Event)
Attribute	A data element. It describes a characteristic of a data entity. (Example: Cause [of an event])

(NOTE: The object "attribute" is not required by the Enterprise Model. Examples of attributes are used SOLELY to demonstrate or "prove" data entities, i.e., to the extent there are attributes that describe the data entity, the entity is valid for use in the model. Example attributes for each entity can be found in the Data Dictionary.)

These objects are related as shown in Exhibit II-1. There can be more than one value for each object. For example, an organization may perform more than one function. As can be seen from the interrelationships, a change in one object can affect another object. Changes in any of these objects can impact an organization's information planning.

B. OBJECT VALUES

Complete listings of object values are provided in Sections III and IV. An example of the values of these objects as they relate to the NRC is provided in Exhibit II-2.

For the object "goal" for the NRC we used the Policy and Planning Guidance goals and added "support NRC operations" for the administrative type functions and "enhance external relations" for those functions primarily directed at dealing with parties outside the NRC. Definitions of the object values for functions are shown in Exhibit II-3. Because of the volume of data entities and their attributes, definitions of entities and their properties are provided in the accompanying Data Entity Dictionary.

OBJECT NAME	EXAMPLE VALUE
GOAL:	Assure safe operation of nuclear plants
ORGANIZATION:	Enforcement Staff, Office of Inspection and Enforcement
FUNCTION:	Enforcement
ENTITY:	Violation*
EXAMPLE ATTRIBUTES:	Severity Level (I, II, etc.) Date Penalty
ISSUE:**	Reduction in the number of new reactors being licensed

---

* Related Entities: Licensee, Site, Unit, Inspection

** Issues relate to NRC as a whole, not to individual organizations.

EXHIBIT II-3

DEFINITIONS OF FUNCTIONS

FUNCTION NAME	DEFINITION
Administration	Planning for and managing NRC resources (budget, personnel, and property and equipment) to achieve agency goals.
Audit	Investigating and inspecting to ascertain and verify the integrity of all NRC internal operations.
Emergency Response	Planning for, responding to, and monitoring occurrences involving nuclear materials or facilities. Also includes the monitoring of licensees emergency preparedness plans.
Enforcement	Enforcing NRC requirements with regard to licensees.
External Relations	Maintaining contact with the public and outside agencies or higher authorities.
Inspection	Planning for and executing inspections of licensee facilities, nuclear materials, operating procedures, plans, and overall management and staffing.
Investigation	Examining the facts surrounding an allegation of wrong-doing related to nuclear materials or facilities.
Legal	Interpreting laws and regulations, advising NRC on interpretations, and representing and protecting the interests of the NRC or the government, as appropriate.
Licensing	Planning for and management of the licensing of reactors, materials (processing, storage, shipment, waste disposal), operators, licensee plans and procedures.
Policy and Planning	Developing and directing policy and plans for the entire NRC.
Research	Analyzing and evaluating nuclear plants and operations and developing recommendations for improving the overall safety of nuclear plants and operations.

III. AGENCY-WIDE REQUIREMENTS

This section provides summary reports on agency-wide information requirements in the Enterprise Model. The reports are organized as follows:

Tab A	Goals, in alphabetical order, with a listing of associated organizations.
Tab B	Issues, in alphabetical order, associated with the NRC on an agency-wide basis only.
Tab C	Functions, in alphabetical order, with a listing of associated organizations which are responsible for that function or any part of that function.
Tab D	Entities, in alphabetical order, with a listing of all associated organizations who use or are "responsible" for the entity.

In the initial draft of the Enterprise Model, entities were associated with a particular function within an organization. During the validation task, organizations added entities to their requirements list. However, the new required entities were not recorded by function. We determined that the additional level of effort required to determine which entity was used by which function within an organization was not cost effective. Further, this information was not required for the subsequent data modeling activity. Therefore, the association of entities with functions was not included in this Enterprise Model.

REFERENCE MATERIALS

Definitions of organizational abbreviations can be found in Appendix A. Definitions of functions are provided in Section II. Definitions of entities and a description of their properties are provided in the Data Entity Dictionary.

*Please note that the term "process" appears on these reports and is used interchangeably with the term "function".

ISSUES

The issues listed on the following page may have an impact on the:

- Type of data required by the NRC to achieve its mission;
- Volume of data currently used by the NRC; or
- Priority for developing databases within the Corporate Data Network (CDN).

This information will be used in preparing the Strategic Data Plan.

NRC CORPORATE DATA NETWORK ENTERPRISE MODEL

ISSUES:

1. CHANGE OF GOALS ASSIGNED TO OFFICES.
2. CHANGE IN NRC REGULATIONS.
3. CHANGE IN PART 35 (MEDICAL).
4. CHANGE IN PART 39 (WELL-LOGGER).
5. CHARGEBACK METHODOLOGY NOT WELL DEFINED.
6. CONSOLIDATION OF NRC BUILDINGS.
7. DECREASE IN LICENSING TIME.
8. EX PARTE MAY LIMIT ACCESS.
9. FEW NEW REACTORS BEING LICENSED.
10. IMPROVE CONSISTENCY WITH INDUSTRY PRACTICES.
11. INCREASE IN # OF AGREEMENT STATES.
12. INCREASE IN # OF ALLEGATIONS.
13. INCREASE IN # OF RESIDENT INSPECTORS.
14. INCREASE IN FOIA REQUESTS.
15. INCREASE IN HIGH LEVEL WASTE.
16. MOVE TO STANDARD REACTOR DESIGN.
17. NEED TO SHARE DATA OUTSIDE NRC.
18. NRC BUDGET CUTBACKS.

IV. ORGANIZATION REQUIREMENTS

This section provides summary reports from the Enterprise Model for each organization. The reports are presented in alphabetical order by organization. Each report provides all associated objects for the organization to include:

- Parent organization ("is managed by") or Sub-unit, if any ("manages");
- Goals;
- Entity types; and
- Functions.

Note that the phrase "is responsible for" is used in associating entities to organizations. This phrase means that the entity is used by the organization in performing its functions. It is not meant to imply that the organization is responsible for maintaining and updating information about the entity.

REFERENCE MATERIALS

Definitions of organizational abbreviations can be found in Appendix A. Definitions of functions are provided in Section II. Definitions of entities and a description of their properties are provided in the Data Entity Dictionary.

V. CURRENT SYSTEMS ANALYSIS

Concurrent with the development of the Enterprise Model and Data Dictionary, we reviewed the data contained in the current systems. The purpose of this review was to obtain additional information regarding data redundancy, unmet needs, and unnecessary data to assist in developing general estimates of the benefits of developing shared databases.

We identified approximately 175 systems throughout the NRC, excluding most microcomputer based and office automation (e.g., word processing) systems. These 175 systems represent a variety of applications including operational, administrative, document, and scientific systems. Of this, 90 systems were selected by the NRC for our review. The basic criteria for selecting a given system was its potential for containing data that could be shared. Excluded from the current systems review were document/full text and scientific code/data.

Of these 90 systems we were unable to complete our analysis for nine of these systems for one of the following reasons:

- Documentation is not available;
- Data in the system is proprietary;
- Development is not complete; or
- The system is micro-computer based.

For those systems which we did review, our analysis is based on the following assumptions:

- The current systems selected by the NRC for our review contain key management or operational data that is most likely to be shared;

- The documentation for these systems is complete and accurate; and

- All organizations provided complete and accurate information on the systems used by their organization.

The objective of each of our analyses, our methodology, and the results are discussed below.

A. LIST OF CURRENT SYSTEMS

Tab A in this section contains a list of current systems sorted both alphabetically by system acronym and numerically by system number for all 175 identified systems. The 90 selected for review are identified by a "Y" in the column labelled "SCOPE". Those systems selected for review but not reviewed are noted in the "Comment" column. Other information on the list presents additional descriptive information.

B. DATA REDUNDANCY

Data redundancy is defined as a data entity that appears in more than one system. From a cost/benefit perspective, elimination (or minimization) of data redundancy would reduce input, processing, and system maintenance costs, and typically, is a major benefit in converting to a shared database environment. Another benefit, while intangible, is that a reduction in data redundancy generally results in improved data quality or integrity.

In order to obtain a measure of the data redundancy in the current systems, we constructed an "Entity:System Usage Listing" shown in Tab B . This listing was constructed by:

- Reviewing the documentation of each system,
- Reviewing the list of data elements (attributes) for each entity,
- Summarizing the data elements into data entities (a data entity is defined as a collection of data elements [attributes]), and
- Listing each of the data entities and the systems in which the entity is found.

Each of the data entities are presented on the listing with its associated redundancy factor (under the column heading "REDUNDANCY FACTOR") and shows the systems containing each entity under the columns labeled SYS1, SYS2, etc. Supporting the listing is a summary of each of the systems (ordered alphabetically by acronym) and the entities contained in each system.

In a "perfect" database environment, each entity would have a redundancy factor of 0; that is, the entity would only appear in one database. A redundancy factor is computed as "N-1" where "N" is equal to the number of systems containing the entity. This computation provides for a reasonable baseline measurement statistic. For example, the data entity "Event" appears in 11 systems. A redundancy factor of 10, based on the assumption that a "perfect" database design would be totally non-redundant, is computed for the entity "Event".

C. UNMET NEEDS

An unmet need is defined to be a data entity that is required by an organization but is not currently received in an automated format. Generally, an unmet need indicates that an organization must manually consolidate information from a variety of sources (e.g., manual files), and typically represents a time-consuming, expensive (and untimely) method of obtaining information. Satisfaction of these needs will generally reduce costly manual consolidation efforts.

In order to determine whether or not an organization is currently receiving the information it requires to perform its functions, we developed an Organization:System Usage Matrix. We obtained this information by surveying each organization with regard to system usage. "Use" means that an organization inputs at least one data element into a system or receives at least one data element from the system. From this we determined which organizations were receiving which entities.

We then compared this information to the organizational requirements in the Enterprise Model. By matching requirements in the Enterprise Model against usage we were able to identify, by organization, unmet needs, expressed as a factor. For example, the factor for the entity "Event" is 13; this means that 13 organizations who require automated information regarding "Event" currently do not receive this information. A complete summary of unmet needs factors is presented in Tab C, ranked in order from highest to lowest. The Organization:System Matrix listing summarizing which systems are used by each organization is also provided in Tab C.

D. UNNECESSARY DATA

Unnecessary data is defined as data received by an organization that is not required. Like redundancy, it is a general indicator of inefficient processing of data.

We used a similar approach to determine the amount of unnecessary data (data not required but received) distributed to organizations. We compared the Enterprise Model entity requirements, at the organization level, to the listing of entities currently provided through the current systems.

Tab D summarizes the unnecessary data factors for each entity, ranked highest to lowest. These factors indicate the number of organizations which receive information (on specific entities) but do not require it.

APPENDIX A

LIST OF ORGANIZATION ABBREVIATIONS

This appendix provides a list of organization abbreviations used in the Enterprise Model and the Data Entity Dictionary. These abbreviations are the same as those listed in the NRC telephone directory except for a few new organizations; for these, new organization abbreviations were created.

LIST OF ORGANIZATION ABBREVIATIONS

ORGANIZATION ABBREVIATION	ORGANIZATION	OF ORGANIZATION
ACRS	Adv Comm on Reactor Safegrds	Adv Comm on Reactor Safegrds
ADM	Office of Administration	Office of Administration
AEOD	Off Anal & Eval Opn'l Data	Off Anal & Eval Opn'l Data
ASLAP	Atomic Safety & Lic Appeal	Atomic Safety & Lic Appeal
ASLBP	Atomic Safety & Lic Board	Atomic Safety & Lic Board
CA	Office of Congress'l Affairs	Office of Congress'l Affairs
DAE	Div of Accident Evaluation	Off Nuclear Reg'tory Research
DC	Div of Contracts	Office of Administration
DE	Division of Engineering	Off Nuclear Reactor Regulat'n
DEP	Div Emgncy Prep & Engrng Resp	Off Inspection & Enforcement
DET	Div of Engineering Technology	Off Nuclear Reg'tory Research
DHFS	Div of Human Factors Safety	Off Nuclear Reactor Regulat'n
DIP	Div of Inspection Programs	Off Inspection & Enforcement
DL	Division of Licensing	Off Nuclear Reactor Regulat'n
DQAVT	Div QA Vndr Pgms & Tech Train	Off Inspection & Enforcement
DRA	Div of Risk Analysis & Opn's	Off Nuclear Reg'tory Research
DRPES	Div Radiat'n Pgms & Earth Sci	Off Nuclear Reg'tory Research
DRR	Div of Rules & Records	Office of Administration
DSI	Div of Systems Integration	Off Nuclear Reactor Regulat'n
DST	Div of Safety Technology	Off Nuclear Reactor Regulat'n
EDO	Office Exec Dir Operations	Office Exec Dir Operations
EIC	Enfrcmnt & Invest Coord RII	Region II Atlanta
ELD	Office Exec Legal Director	Office Exec Legal Director
ES	Enforcement Staff	Off Inspection & Enforcement
FC	Div Fuel Cycle & Matrl Safety	Off Nuclr Matrl Safety Sfgrds
FOS	Div of Facil's & Opns Support	Office of Administration
GC	Office of the General Council	Office of the General Council
IE	Off Inspection & Enforcement	Off Inspection & Enforcement
IEPS	Program Support Branch	Off Inspection & Enforcement

APPENDIX D

This appendix provides information on the changes made to the entities during the validation task and the subsequent data modeling task.

Exhibit D-1 provides a summary of the changes resulting from the validation task. The status column indicates whether the entity evaluated was on the original entity list or was a suggested new entity. Entities with a "D" status are also documents. The final entity list after validation is shown. This is the list of entities which appear in the Enterprise Model.

Exhibit D-2 provides a summary of the changes to the entities in the Enterprise Model as a result of data modeling. Replacement pages for the Data Dictionary were issued to correspond to these changes.

EXHIBIT D-1

13 ABSTRACT (200 words or less)

The NRC has initiated a multi-year program to centralize its information processing in a Corporate Data Network (CDN). The new information processing environment will include shared databases, telecommunications, office automation tools, and state-of-the-art software. Touche Ross and Company was contracted with to perform a general data requirements analysis for shared databases and to develop a preliminary plan for implementation of the CDN concept. The Enterprise Model (Vol. 1) provided the NRC with agency-wide information requirements in the form of data entities and organizational demand patterns as the basis for clustering the entities into logical groups. The Data Dictionary (Vol. 2) provided the NRC with definitions and example attributes and properties for each entity. The Data Model (Vol. 3) defined logical databases and entity relationships within and between databases. The Preliminary Strategic Data Plan (Vol. 4) prioritized the development of databases and included a workplan and approach for implementation of the shared database component of the Corporate Data Network.
